

# ProGuard G Barrier

Pedestrian barrier, SS 7750-1 class 1 · ProGuard G range

## TECHNICAL FEATURES

### Description

ProGuard G Barrier is a pedestrian barrier meeting SS 7750-1 class 1. The wide foot withstands wind loads up to 20 m/s and can be pivoted 90 degrees so the rail packs to only 35 mm for storage and transport; two fork pockets in the mesh allow a stack of rails to be moved by forklift or wheel loader.

### GENERAL

|              |                                                                   |
|--------------|-------------------------------------------------------------------|
| Product type | Pedestrian barrier rail with integrated pivoting foot             |
| Application  | Protected area for pedestrians moving around a work zone          |
| Accessories  | Swivel foot Art. 10194 · reflector clips · Barrier Box Art. 88000 |

### DIMENSIONS & WEIGHT

|              |                         |
|--------------|-------------------------|
| Length       | 2.5 m                   |
| Width        | 0.35 m                  |
| Height       | 1.1 m                   |
| Weight       | 20 kg                   |
| Packed width | 35 mm with foot pivoted |

### APPROVALS & PERFORMANCE

|                |                                    |
|----------------|------------------------------------|
| Standard       | SS 7750-1 class 1                  |
| Wind stability | Withstands wind loads up to 20 m/s |

### HANDLING & FEATURES

|            |                                                                                   |
|------------|-----------------------------------------------------------------------------------|
| Coupling   | Strong built-in coupling at ergonomic height, easy to fit, resists heavy twisting |
| Handling   | Two fork pockets in the mesh for moving a stack by forklift or wheel loader       |
| Visibility | Reflectors in two warning colours                                                 |

ProGuard GC is a design-protected modular system for a protected pedestrian and cycle area around the work zone, tested and approved to SS 7750-1 in classes 1, 2 and 3. Rails mount on GC feet, on ProGuard City barriers and on ProGuard CB barriers with the GC bracket.
